

# 18. Test Closure Report

The **Test Closure Report** is the final official document of the API testing lifecycle. It is prepared after completing all testing activities on the system, in this case the Fake Store API.

It provides a **formal summary of testing completion, quality status, and final approval recommendation**.

This report is usually shared with QA leads, managers, or clients.

---

## 18.1 What is a Test Closure Report?

A Test Closure Report is a document that summarizes:

- What was tested
- How it was tested
- What was achieved
- Final quality status of the system

It confirms that **testing activities are completed successfully**.

---

## 18.2 Objectives of Test Closure Report

- To officially close the testing phase
  - To summarize test execution results
  - To highlight defects and resolutions
  - To provide final quality status
  - To support release decision-making
- 

## 18.3 Contents of Test Closure Report

### ◆ 1. Project Information

- Project Name: Fake Store API Testing
  - Tools Used: Postman, Newman CLI
  - API Type: REST API
-

## ◆ 2. Testing Scope

Covered modules:

- Authentication
  - Products
  - Cart
  - Users
  - Categories
- 

## ◆ 3. Test Execution Summary

**Example:**

- Total Test Cases: 50
  - Passed: 48
  - Failed: 2
  - Pass Percentage: 96%
- 

## ◆ 4. Test Environment Details

- Base URL: <https://fakestoreapi.com>
  - Tools: Postman, Newman
  - OS: Windows/Linux (as applicable)
- 

## ◆ 5. Test Results Summary

### ◆ Functional Testing

- Most APIs working correctly
- CRUD operations validated successfully

### ◆ API Response Validation

- JSON structure verified
- Data integrity maintained

### ◆ Performance Testing

- Response time within acceptable range

- No major latency issues observed
- 

## ◆ 6. Defect Summary (if any)

Example:

- Minor issue in Cart update API delay
- Missing field in specific response (if applicable)

Each defect includes:

- Severity (High/Medium/Low)
  - Status (Open/Fixed/Closed)
- 

## ◆ 7. Risk Analysis

- No critical risks found
  - Minor performance risks in heavy load scenarios
  - API stability considered good
- 

## ◆ 8. Test Metrics

- Test Coverage: High
  - Automation Coverage: Medium (Postman + Newman)
  - Regression Readiness: Yes
- 

## ◆ 9. Test Closure Criteria

Testing is considered complete when:

- All critical APIs are tested
  - No open high-severity defects
  - Test cases executed successfully
  - Reports generated successfully
- 

## ◆ 10. Final Sign-Off

- QA confirms system is stable
  - APIs are ready for integration or production use
  - Testing phase is officially closed
-
