

Test Closure Phase Test Closure Report:

Purpose of Test Closure Phase

The Test Closure Phase is the final phase of the software testing life cycle. In your SauceDemo Data Driven Testing project, this phase confirms that all testing activities are completed, results are analyzed, and the project is formally closed from a testing perspective.

In simple words

This phase officially marks the end of testing and summarizes what was tested, how it was tested, and what was the final result.

What is Test Closure Report

The Test Closure Report is a document that provides a complete summary of the testing process. It includes test execution results, defect summary, coverage details, and final project status.

In your project, this report is stored as

14 Test Closure Phase
Test Closure Report.docx

Objectives of Test Closure Phase

The main objectives are

- To confirm test execution completion
- To analyze overall test results
- To document defects found during testing
- To evaluate test coverage
- To provide final quality status of application
- To capture lessons learned for future projects

Contents of Test Closure Report

Your Test Closure Report generally includes the following sections

- Test summary report
- Test execution summary
- Defect summary

Test coverage analysis
Environment details
Exit criteria evaluation
Final testing conclusion

Test Execution Summary Example

In your SauceDemo project

Total test scenarios executed
Login functionality tests
UI validation tests
Boundary value tests
Data driven CSV tests

Example summary

Total Test Cases Executed 120
Passed 110
Failed 10
Execution Status Completed

Defect Summary Example

During testing following defects were found

Login redirection issue
Invalid username accepted
Button not responding issue
Report generation failure

Example format

Critical defects 2
Major defects 5
Minor defects 3
Total defects 10

Test Coverage Analysis

This section shows how much application was tested.

In your project coverage includes

Login page testing
Positive login scenarios
Negative login scenarios
UI element validation
CSV based data driven testing
Screenshot validation
Report generation validation

Example

Functional coverage 100 percent
UI coverage 95 percent
Automation coverage 100 percent

Exit Criteria Evaluation

Before closing testing, exit criteria must be checked

All planned test cases executed
Critical defects fixed or documented
Test reports generated successfully
Automation scripts executed without major failures
No open blocker issues remaining

If all conditions are satisfied then testing is marked complete

Environment Details

This section describes testing setup used

Operating System Windows 10 or 11
Browser Google Chrome
Automation Tool Selenium WebDriver
Framework TestNG with Maven
Language Java
Data Source CSV File

Final Test Conclusion

This is the most important part of Test Closure Report

Example conclusion for your project

Testing of SauceDemo login functionality using Data Driven Testing has been completed successfully. Most of the test cases passed and automation framework executed as expected. Few defects were identified in login validation and report generation which are documented in defect report. Overall application stability is acceptable for further testing or deployment.

Lessons Learned

During your project execution you may observe

Importance of proper locator strategy in Selenium
Handling CSV data correctly is critical for DDT
Logging helps in debugging failures quickly
Report generation is important for test visibility
Proper framework structure improves maintainability

Importance of Test Closure Phase

It helps in:

Formal project completion
Management reporting
Quality assurance sign off
Future project improvement
Audit and compliance documentation
